

Elastic IP Removal Instructions

To remove the elastic IP from an EC2 instance, do the following:

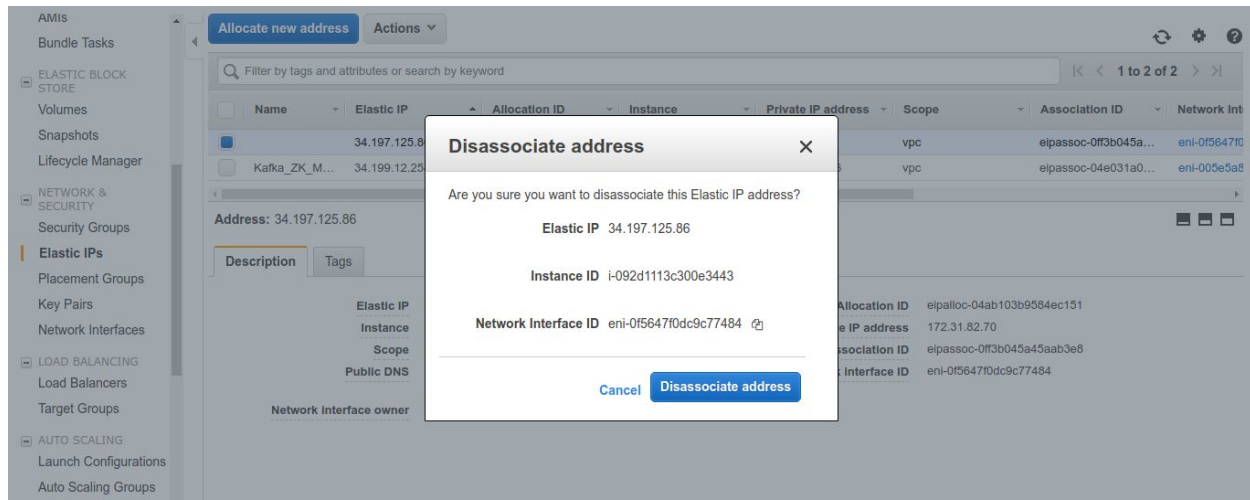

- Go to the **Elastic IPs** page, as shown below.

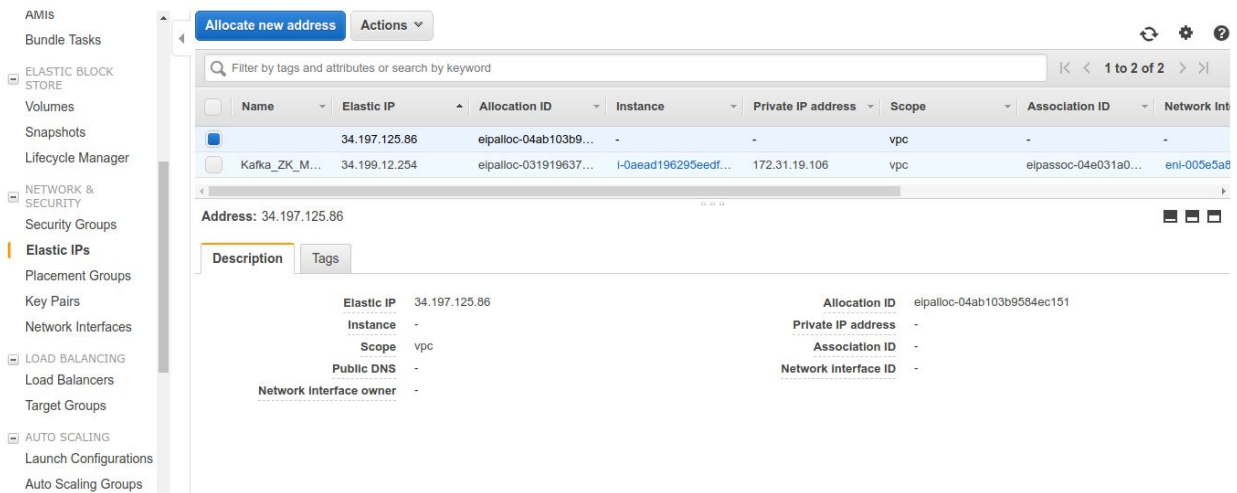

- Choose the elastic IP which you want to remove and then click on the **Actions** button, as shown below.

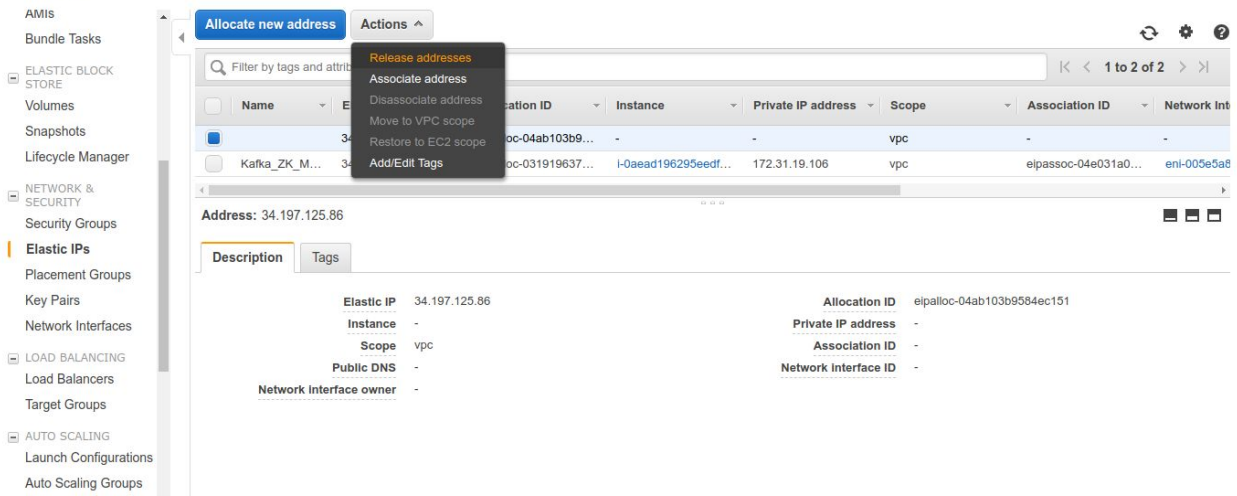

- In the drop-down list, click on the **Disassociate address** link. A new dialogue box will appear as shown below.

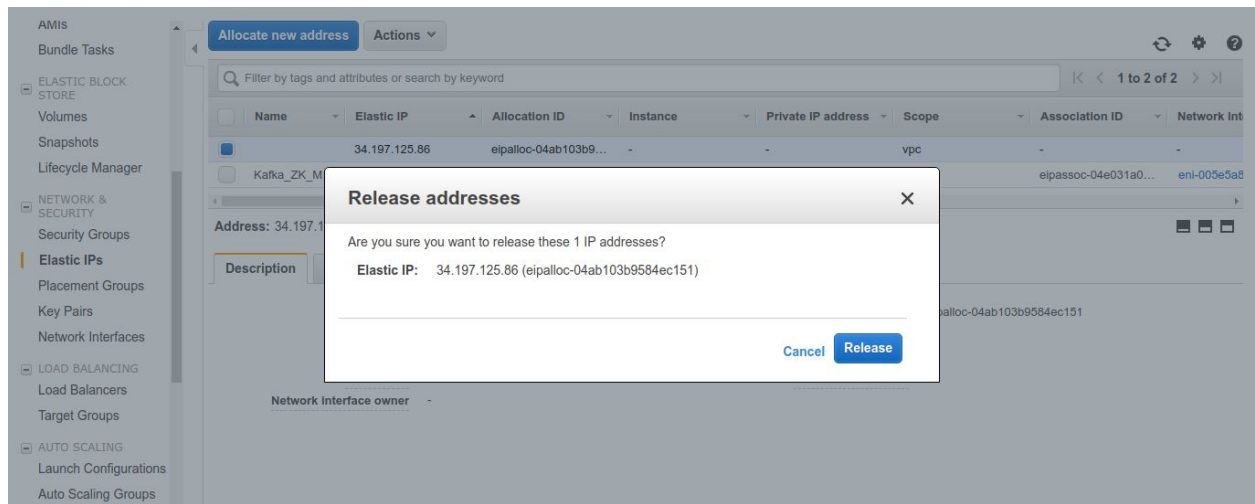

- Click on the **Disassociate address** button. The elastic IP will get disassociated with the EC2 instance, as shown below

- Click on the tickbox against that elastic IP and then click on the **Actions** button. A drop-down list will appear. In that list click on the **Release address** link as shown below.

- After clicking on the **Release address** link, you will get a new dialogue box, as shown below.

- Click on the **Release button**. The elastic IP will get deleted.
